Welcome to Drone Zone Austria

A web portal that supports drone mission planning in Austria

www.dronezoneaustria.at

UAS F&E Project volume 2014 - 2018 “+ 1 Mill. €”

- **RPAmSS** – New environmental robotic services with a Remotely Piloted Aerial multi Sensor System - COIN
- **Drone Zone Austria** - Design of a Web Portal for Safe Drone Mission Planning in Austria - TakeOFF
- **Drone based Wetland Monitoring „Bleistätter Moor“**
2017 – 2021 – Research Cooperation Regional Government Carinthia, Dept. 8 Environment, Water & Nature Protection
- **FISHSTREAM** – Site Evaluation Fish Ladders– Key Indicators & UAS-based Analysis Tools Analysetools – Verbund, flussbau iC, ViewCopter, BOKU
- **WÖRTHERSEE 3D** - „UAS-based photogrammetric Analysis of Lake Shores – Example Lake Wörthersee“ – Research Cooperation Regional Government Carinthia, Dept. 8 Environment, Water & Nature Protection

Motivation
Problem Definition
Methods
First Results
Next steps

MOTIVATION

➤ EU Waterframework Directive

- 2000/60/EG (WRRL) requires an assessment of chemical and **ecological condition** of surface water bodies:
 - Biological, chemical and **hydromorphological quality components**

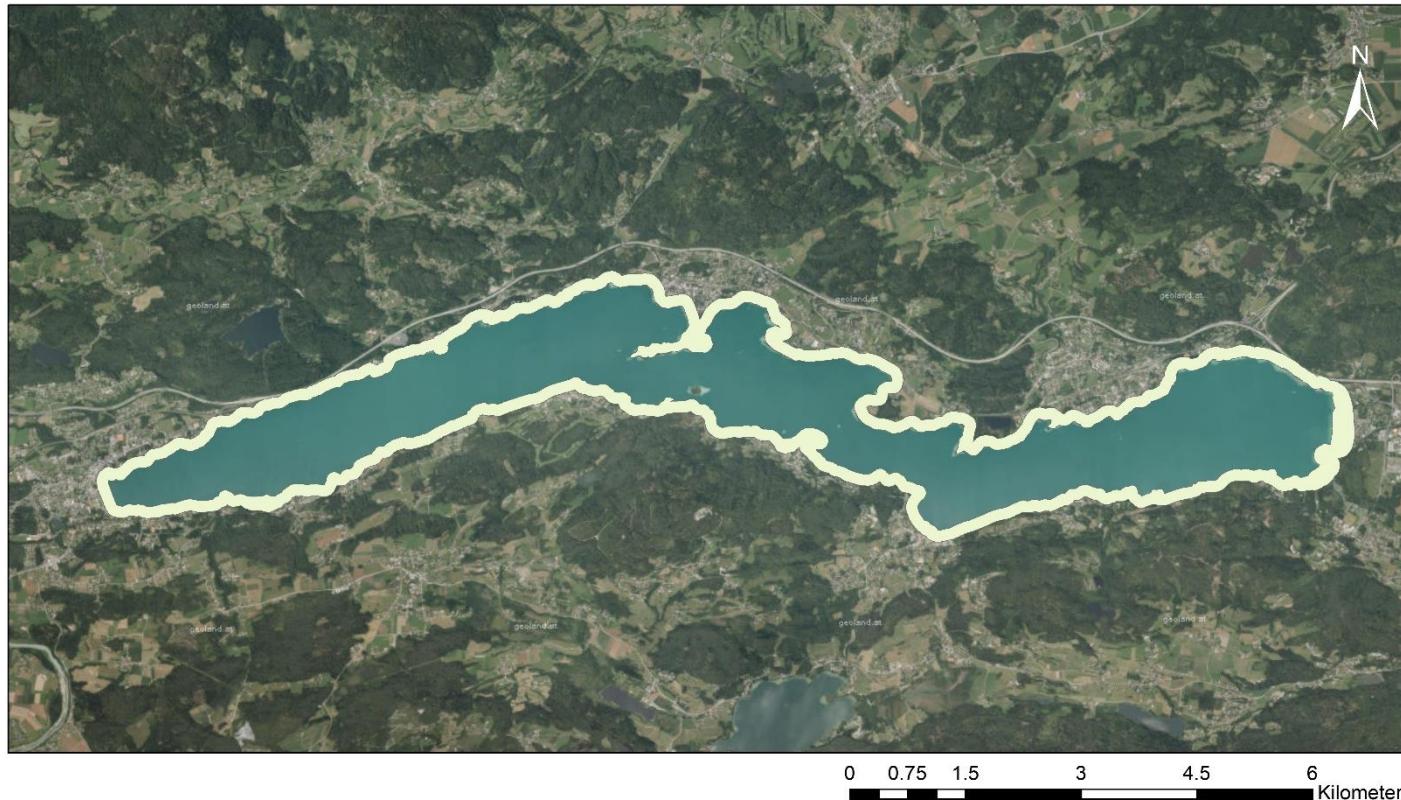

➤ 2017 Echo Sounding Campaign Wörthersee

- Last survey 1976 - 49 profiles, map with 10m isolines (1:25.000)
- New survey with Multi Beam (Deep water) & Single Beam Echo sounding (Shallow water)

Problem Definition

➤ Comprehensive capture of entire lake shore area

- approx. 150 m wide shore strip, Water-Land Transition Area, **46 km shore line**, 5.5 km^2
- Low vegetation activity– Spring 2018

Methods - Overview

➤ Organisation & Planning

- Mission Planning & Control Points

➤ UAS – Missions

- Multirotor UAS (ViewCopter)

➤ Ground Truth

- DGNSS – Control Points (flussbau iC)
- Single Beam Echo Sounding (Dr. Döller Vermessung ZT GMBH)
- Water gauge Pörtschach: Water level

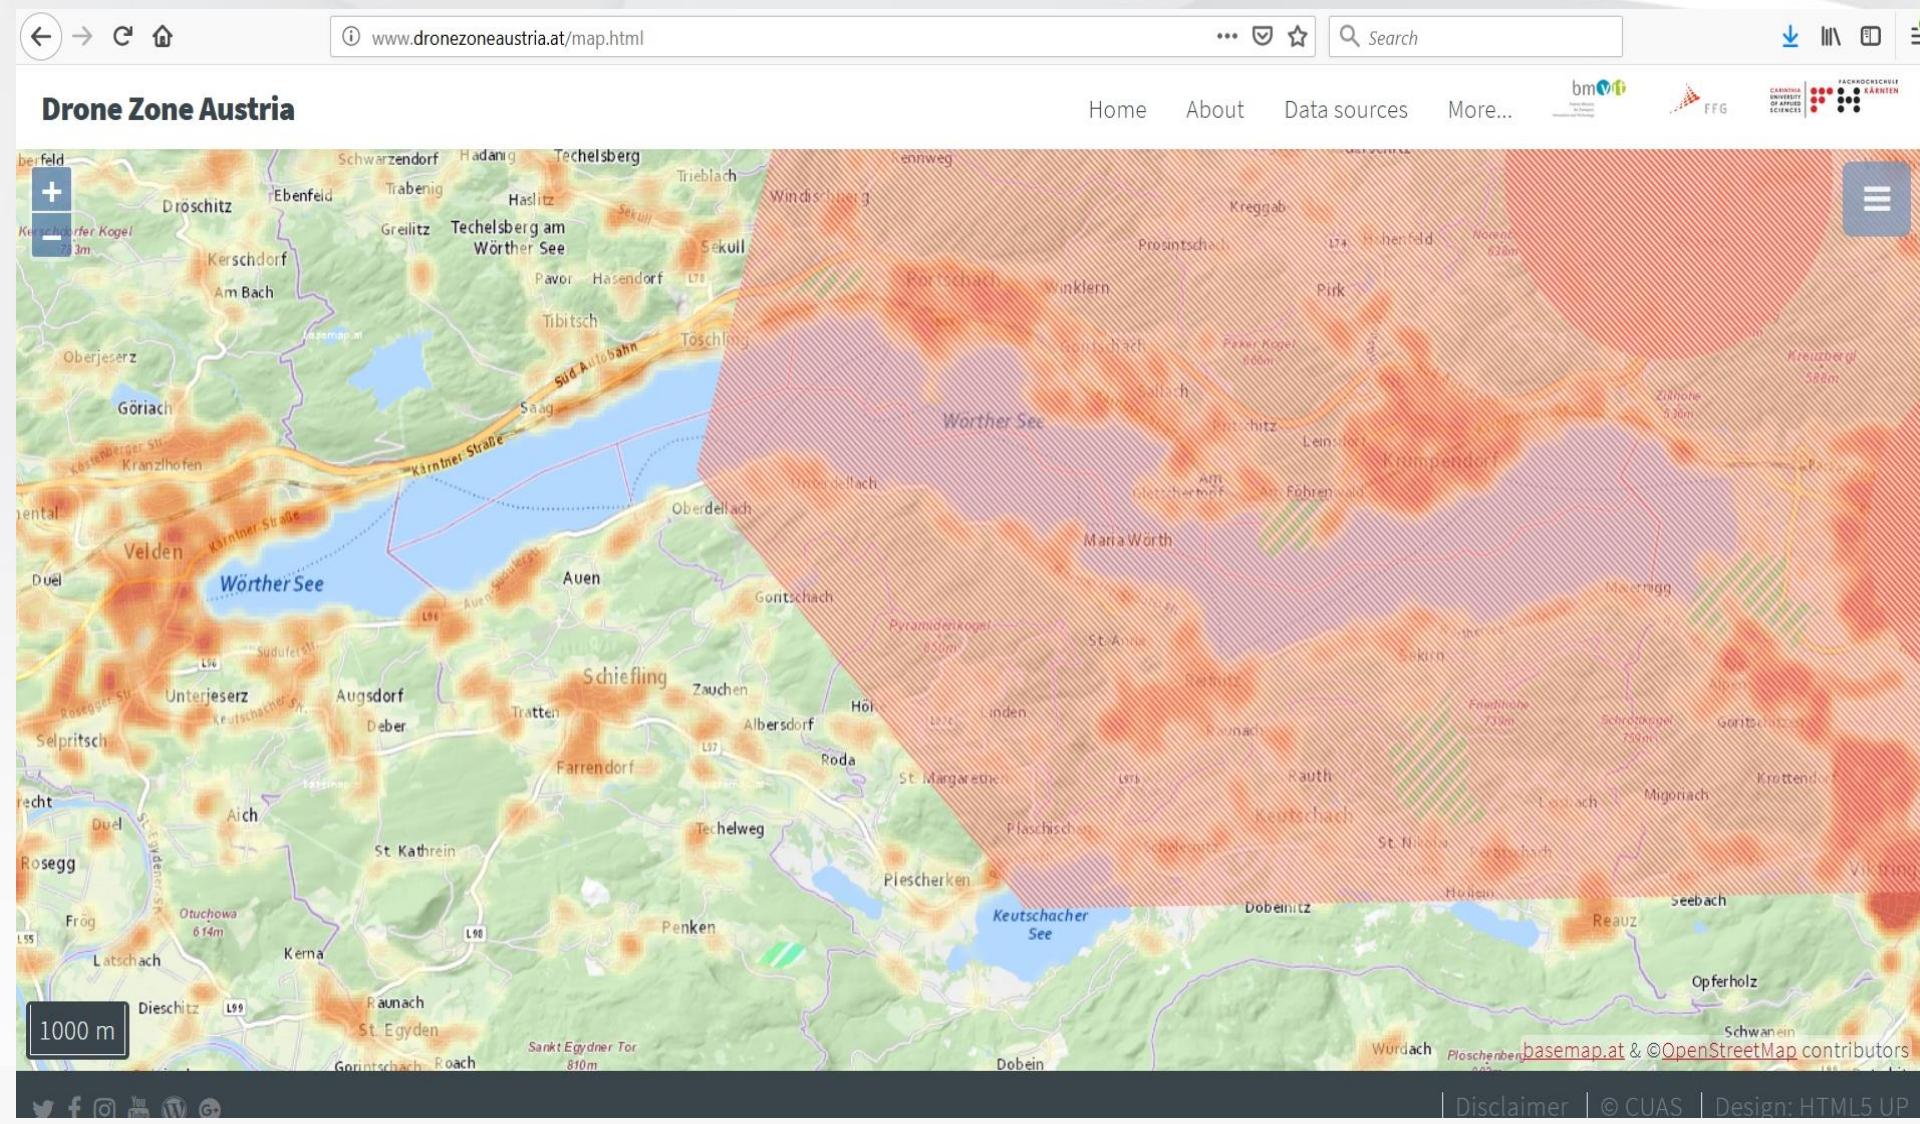

➤ Photogrammetric Analysis

- DSM, Orthophotomosaic

➤ Data fusion – Shallow water bathymetry

- Resampling, Integration, map sheets

Mission Planning

UAS Missions

➤ UAS

- Viewcopter V6H (adapted Hexacopter based on DJI Matrice 600 Pro)
- Class 1 - Category C flight permission
- Approx. 25 minutes Flight time

➤ Camera

- SONY ILCE-A7RM2 Full format camera, 43 MP, 28mm lens

➤ Period

- 27.March – 18. April 2018
- 11 Mission days

Photogrammetric Analysis

➤ Iterative Processing – Quality Control

- Phase I: Quick evaluation contemporary to UAS missions
 - Check overlap & image quality
- Phase II: Evaluation with high point density & manual control point allocation

➤ Hierarchic Bottom-Up Strategy

- 54 Flight segments
- Aggregation to 9 mission areas

➤ Software

- AGISOFT Photoscan Version 1.4.1.

➤ Hardware

- XEON Server with 24 Kernels, 4 GPU NVIDIA 20N Graphic cards & 128 GB RAM

UAS Shallow Water Bathymetry

Empirical evaluation UAS versus Single Beam Echo Sounding –
First Results

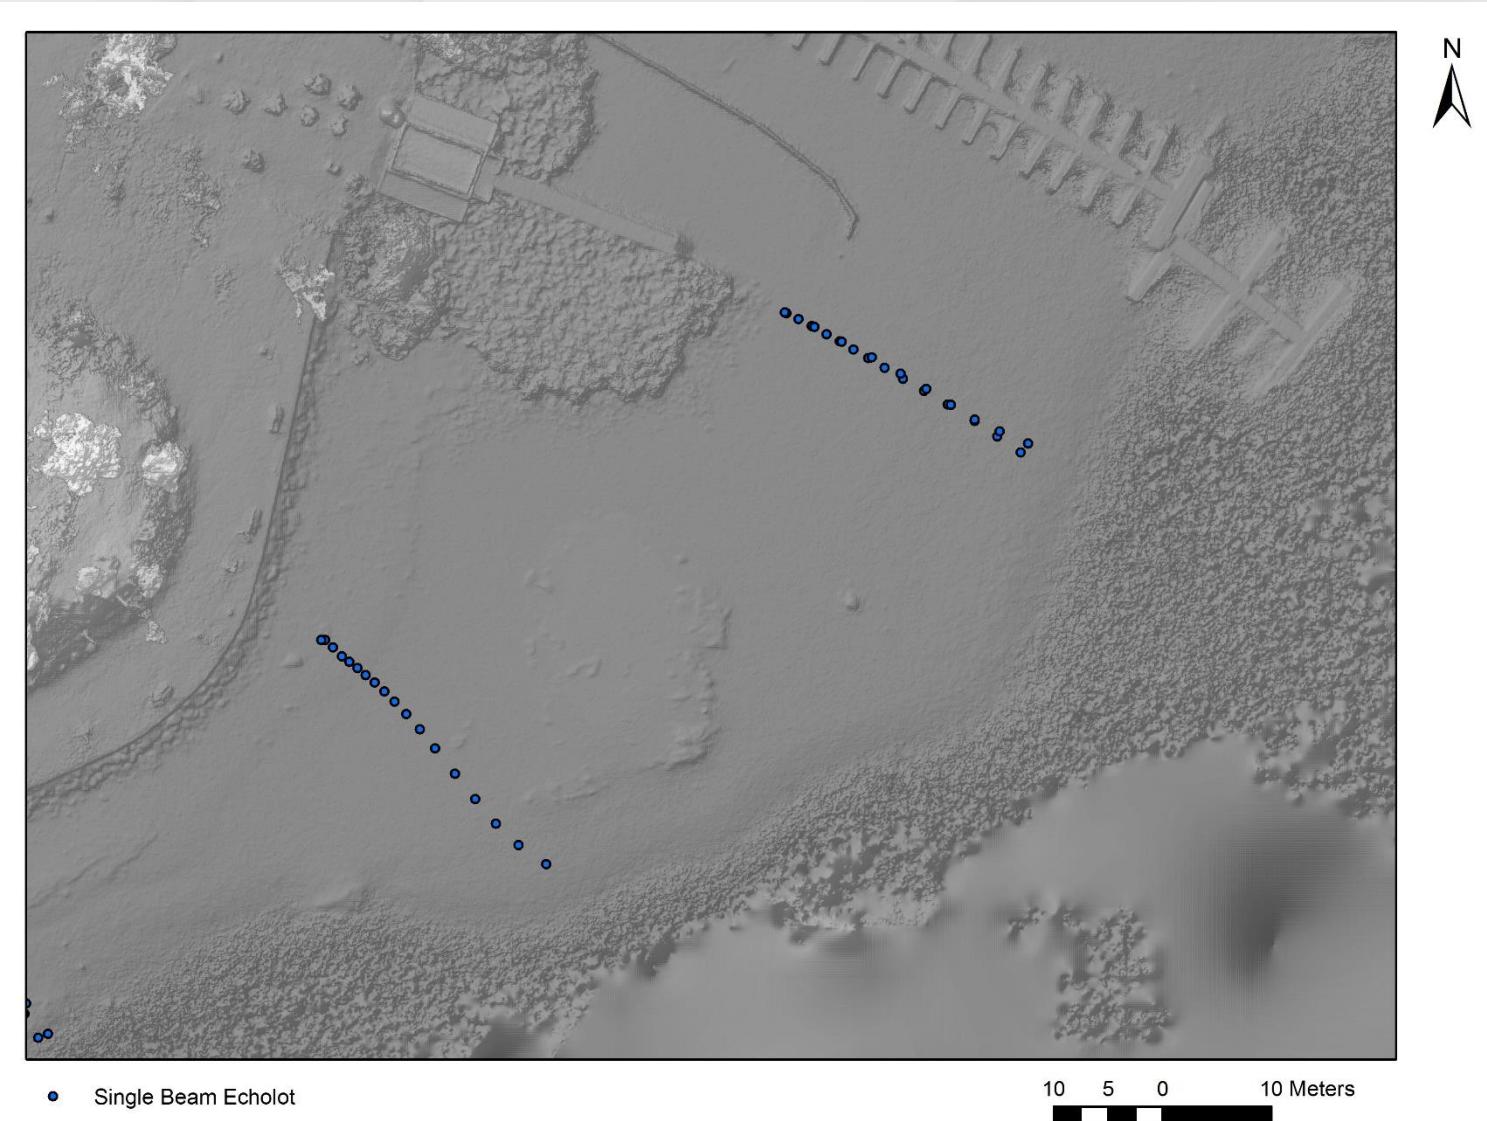

- Single Beam Echolot

10 5 0 10 Meters

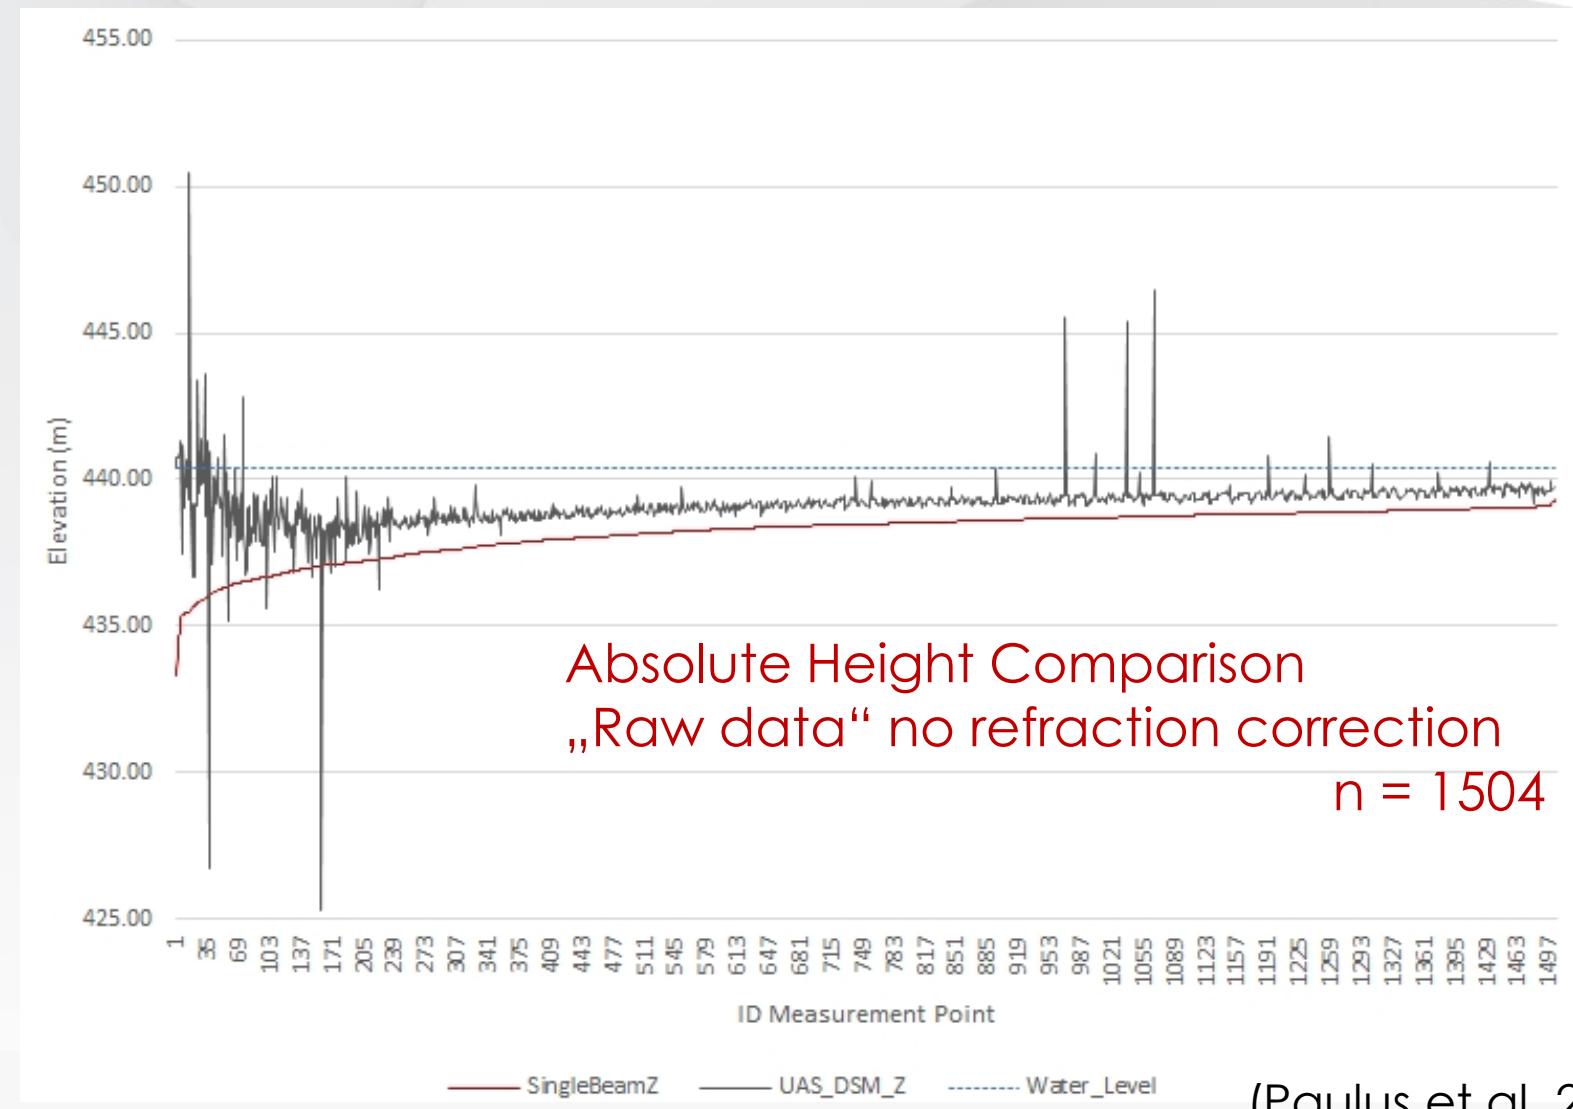

UAS Shallow Water Bathymetry

Empirical evaluation UAS versus Single Beam Echo Sounding –
First Results

UAS Shallow Water Bathymetry

Empirical evaluation UAS versus Single Beam Echo Sounding –
First Results

Next Steps

- **Statistical assessment total shallow water area**
 - Current: approx. 5.5 km shallow water – 1504 Single Beam reference points
 - Final: approx. 50 km - 8295 Single Beam reference points
 - Local versus global models
- **Consideration of accuracy/uncertainty Single Beam Echo sounding**
 - Lake bottom types?
- **Environmental influence?**
 - Calm water versus wind & waves?
